### Our History CREATING

## TENGIOOLS

Follow our journey to becoming one of the leading manufacturers of hand tools and tool storage solutions used by professionals and enthusiasts in demanding environments around the world.

## 1985

Our founder Henri Tengvall saw the mechanics' need for a well selected range of hand tools and storage solutions that could work together to meet the demands of each individual.

The Teng Tools name is derived from the Asian folk hero Tengu. He was characterised by strength, courage and innovative thinking, properties that our brand has inherited.

## 1993

Teng Tools redefined the socket set market by introducing the Meccarosso range of Socket Sets. A heavy duty PS material insert tray stored and organised the tools in these sets. Recessed handles also provided a comfortable grip and the case had rubber feet to prevent sliding.

### 1990

Teng Tools launched to a global audience making its debut at the Cologne Trade Show. This platform highlighted the quality of our tested and approved tools and started the expansion into different markets. Following this show Teng Tools launched in Sweden in Norway and has been one of the leading brands ever since.

## 1997

and the unique Tool Tray System. That has now become the core concept of personalised sets that fit into your chosen Storage Solution. Build your ultimate tool kit to suit your exact needs

## 2004

The Mega Master is born! The launch of the iconic 1,001 piece tool kit supplied in a full storage stack system comprising of a 10-drawer roller cabinet, a 3 drawer middle box and the 6 drawer top box with the Teng Tools eyes making any lucky owner of this kit stand out from the crowd. It has become the biggest selling tool kit in the range.

## 2013

Pete Solberg launched his WRX team with support from Teng Tools. Winning his inaugural FIA WRX Championship. This started a long standing relationship between Teng Tools and the World Rally Cross culminating in Teng Tools becoming the headline sponsor in 2016.

## 2009

After growing to be available in over 30 countries around the world, Teng Tools are now synonymous with being one of the pioneers of tool organisation. The EVA Tool Storage solution was introduced with foam cut outs to fit the exact shape of each tool, protecting the tools. When tools are removed their place in the set is clearly visible in red.

2019

With the range standing at over 3000 products, Teng Tools continued to innovate and design new products from the HQ in Sweden. Anti-slip spanners, torque wrenches with torque testing equipment, work benches and workshop racking have all recently been added with 'Typically Teng' features.

2020

Teng Tools introduces their first distributor on the African continent and together they developed a series of tool sets for the South African market.

## DO'S AND DON'TS OF SPANNERS

THE RIGHT SIZE SPANNER

Use the correct size spanner, the wrong size spanner will damage the fastening making it more difficult to tighten or loosen. It might also damage the spanner.

THE RIGHT TYPE OF SPANNER

Use the spanner type that gives you the best access, the most secure hold on the fastener and best turns the fastener (e.g. ratcheting spanners are very good for turning quickly but fixed spanners can give much more torque).

KEEP IT CLEAN AND DRY

After use always check the tools are clean and dry before putting them away, this will help to avoid problems such as corrosion and moving parts seizing or becoming tight.

DO NOT USE SCAFFOLDING POLES OR SIMILAR

If the fastener will not turn with the tools you are using you need to use a more powerful tool such as a larger tool or even an impact power tool. Do not use bars to increase the leverage - it is dangerous and can break your tool.

DO NOT USE A VEHICLE TO TURN THE NUT

Do not fix a spanner or wrench on to a fastening and then drive the vehicle to force it to turn - needless to say it is dangerous and can break the tools.

## DO'S AND DON'TS OF **PLIERS**

#### **✓** USE THE CORRECT CUTTING TOOL

If the plier does not cut the material without excessive force then use a stronger plier or a different type of tool. For example, standard side cutters are for cutting electrical wire not split pins.

#### USE THE RIGHT TYPE OF GRIPPING

Different types of pliers are designed for different types of grips - make sure the plier selected grips securely and comfortably.

#### USE THE RIGHT SIZE OF PLIER

The longer the handle the more power or torque can be applied when cutting or gripping.

#### **⊗** DO NOT USE THE WRONG PLIER

If the plier does not grip tightly and securely or does not cut with reasonable rather than excessive force choose another plier or tool.

#### DO NOT USE ON LIVE ELECTRICS

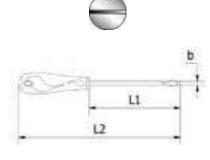

If you have to work on electrical or electronic equipment disconnect the power supply wherever possible and always use insulated tools even if you believe that the power is off.

#### **FRP Ratchets**

Teng Tools steel reinforced fibre ratchets have been designed to create a 45 teeth (8 degree increment) ratchet with quick release and flip reverse to meet or exceed all internationally recognised quality and torque specifications. The design protected ratchet (24583ROC) is not only lighter and just as strong but is also much more comfortable to use than regular ratchets. New style bi-material handles for a more comfortable grip.
